Professional Summary

Bilingual software engineer and consultant with 5+ years of experience building and operating production backend systems in Go on AWS and Google Cloud. Delivers internal products for an enterprise retail client at Reaktor, with responsibility for incident response and releases across five regions. Experience includes zero-downtime migrations, services handling approximately 10,000 requests per second, Python data pipelines, and Japanese-English technical interpretation for product and engineering teams.

Technical Skills

Programming and APIs: Go, Python, TypeScript, PHP, Swift; microservices, gRPC, REST, GraphQL

Cloud and Data: Google Cloud (Cloud Spanner, Cloud SQL, Firestore), AWS (ECS, ECR, EC2, S3, Aurora RDS, ElastiCache), Tencent Cloud; Kubernetes, Terraform, PostgreSQL, Redis

Delivery and Operations: Datadog, CircleCI, Spinnaker, GitHub Actions; on-call incident response, performance optimization, batch pipelines, code review and mentoring

Professional Experience

Reaktor | Senior Software Engineer, Consultant

May 2024 - Present | Tokyo, Japan

- Designed and developed internal products for a global Japanese apparel retailer, modernizing employee workflows through hands-on software consulting and delivery.
- Developed backend services in Go and PostgreSQL on AWS and Tencent Cloud, alongside iOS client features in Swift using UIKit and RxSwift.
- Owned on-call operations, user inquiries, and release handling for production systems across five regions; restored critical systems during incidents and implemented long-term fixes to prevent recurrence.
- Helped diagnose and fix Redis over-scanning as part of the team, reducing latency by 90%+ on affected cached-read queries by replacing repeated scans with one lookup per key.
- Resolved API performance bottlenecks and recurring batch pipeline issues; designed and prototyped a backend re-architecture to reduce technical debt and simplify data models.

HireRoo | Software Engineer

Mar 2023 - Mar 2024 | Tokyo, Japan

- Led full-stack development of cheating-detection features for a technical interview platform built with Go microservices, Kubernetes, gRPC, GraphQL, TypeScript, and React.
- Built a Python data pipeline that collected 250K+ algorithm submissions for plagiarism detection; designed and implemented a code-similarity service using the winnowing algorithm with interactive visualization of matching code.
- Co-invented a system for detecting and visualizing suspicious copy-paste behavior in coding interviews (Japanese patent publication 2024-173146); implemented tab-focus, IP-geolocation, and third-party-access signals to flag suspicious activity.

Synspective | Software Engineer

Oct 2022 - Feb 2023 | Tokyo, Japan

- Developed SAR satellite tasking systems using Go, TypeScript, Nest.js, and React/Next.js on Google Kubernetes Engine (GKE).
- Drafted an architecture and schema redesign for the DaaS platform to decouple business logic and improve performance.
- Worked with design and product teams to build a proof-of-concept React interface with complex input handling, filtering, and interactive Mapbox maps.

Mercari | Software Engineer (Backend)

Oct 2020 - Sep 2022 | Tokyo, Japan

- Developed, migrated, and maintained Go microservices on Google Cloud and Kubernetes in a global engineering team.
- Led a zero-downtime migration of master data from a legacy PHP monolith to Go microservices.
- Built low-latency gRPC/HTTP services handling approximately 10,000 requests per second; managed Cloud Spanner infrastructure, Kubernetes, and Datadog monitoring.
- Managed CI/CD pipelines using CircleCI and Spinnaker, maintained greater than 90% test coverage, and served as on-call engineer for multiple critical services.
- Automated translation workflows with GitHub Actions and Memsource; authored the design document for migrating translation data to a structured database.
- Mentored interns and junior engineers through onboarding and code reviews.

Mercari | Manager, Global Operation Team

Jul 2019 - Sep 2020 | Tokyo, Japan

- Co-designed an internal service with engineers to automate translation requests and measure language barriers across the organization, informing language strategy and headcount planning.
- Led team 1:1s, goal setting, and priority alignment.

Mercari | Translator and Interpreter, Global Operation Team

Dec 2017 - Jun 2019 | Tokyo, Japan

- Provided real-time Japanese-English interpretation for product and engineering teams; translated technical specifications, dashboards, code comments, and documentation for internal and external stakeholders.

Education

University of Tasmania | Tasmania, Australia | 2009 - 2014

Bachelor of Business and Bachelor of Arts

Majors: International Business and International Relations
